

Quality Policy Statement

Smart Component Technologies Ltd. (SCT) is dedicated to designing, developing and providing high quality products and services to our customers. To satisfy this, SCT operates a Quality Management System compliant with BS EN ISO 9001:2015 across both their Cambridge and Sheffield sites.

Quality Objectives are primarily set during at least one Management Review meeting per annum. Specific Quality Objectives may also be set as a result of internal audits, changes in legislation or customer requirements, or as part of a continuous improvement programme. Quality objectives will be communicated to individuals through SCT's management structure.

The SCT Board takes into consideration all customer feedback as part of its continuous improvement programme.

Ultimate responsibility of the Quality Management System lies with the Operations Director, but quality is the responsibility of everyone in the organisation.

This quality policy has been defined by the SCT Board and is reviewed at the Management Review meetings to ensure its suitability to SCT's activities and objectives.
